

A

RT Modelling with *trial*

$$\text{Log(RT)} \sim \text{wHS} + \text{IF} + \text{wFA} + \text{Log(P(rej))} + \text{transition type} + \text{trial} + (1 \mid \text{pid})$$

Factor	Coefficient	<i>p</i>
Intercept	0.11	< 0.01
wHS	-0.32	< 0.01
IF	-0.24	< 0.01
wAct	-0.03	= 0.01
Log(P(rej))	0.14	< 0.01
transition type [Global → Local]	-0.10	0.02
transition type [Local → Global]	0.03	0.34
transition type [Local → Local]	-0.06	0.27
trial	0.21	< 0.01

Conditional $R^2 = 0.38$

BIC = 11302

B

RT Modelling with norm-based *switch indicator*

$$\text{Log(RT)} \sim \text{wHS} + \text{IF} + \text{wFA} + \text{Log(P(rej))} + \text{switch indicator} + (1 \mid \text{pid})$$

Factor	Coefficient	<i>p</i>
Intercept	0.08	< 0.01
wHS	-0.36	< 0.01
IF	-0.25	< 0.01
wAct	-0.03	= 0.01
Log(P(rej))	0.26	< 0.01
switch indicator	-0.01	0.67

Conditional $R^2 = 0.32$

BIC = 11438
